ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information. From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurate and validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Country	US
Number of Drugs in Active Development	13
Number of Inactive Drugs	2
Number of Patents as Owner	5
Number of Patents as Third Party	0
Number of Deals	4
Key Indications	Cancer,Acute myelogenous leukemia,Bladder tumor,Chronic myelocytic leukemia,Glioma,Hematological neoplasm,Myelodysplastic syndrome,Neoplasm,Solid tumor,Myeloid leukemia
Key Target-based Actions	IL-3 receptor modulator,CDw123 modulator,Frizzled receptor modulator,Glypican-3 modulator,Notch receptor modulator,Prominin 1 modulator,Smoothened receptor modulator,Tie 1 tyrosine kinase receptor modulator,CDw123 antagonist
Key Technologies	Biological therapeutic,Parenteral formulation unspecified,Monoclonal antibody,Small molecule therapeutic,Monoclonal antibody conjugated,Antibody conjugated,Imaging

COMPANY PROFILE

SUMMARY

Stemline Therapeutics Inc is a clinical stage biopharmaceutical company that develops oncology compounds directed at cancer stem cell targets and tumor bulks.

FINANCIAL

In May 2013, the company planned to raise \$60 million gross proceeds from an underwritten public offering of 4,137,931 shares of its common stock at \$14.50 per share. The underwriters were granted a 30-day option to buy up to 620,689 additional shares of common stock. Later that month, the offering was closed. Later that month, the underwriters exercised in full their option to purchase an additional 620,689 shares of common stock. At that time, the total gross proceeds were expected to be approximately \$69,000,000 and the closing of the option to purchase additional shares was expected to occur on or about May 28, 2013.

In January 2013, the company was to raise gross proceeds of \$33,176,440, through an IPO of 3,317,644 shares of common stock priced at \$10 each. Underwriters were granted a 45-day option to purchase additional shares up to 497,647 shares of common stock to cover over-allotments. The offering was expected to close on January 31, 2013. At that time, shares were expected to be traded on the NASDAQ market on January 29, 2013. In January 2013, underwriters exercised in full their over-allotment option increasing gross proceeds from the offering to \$38,152,910; later that month, the offering was closed. Later in January 2013, the company began trading on the NASDAQ stock market.

In April 2012, the company had filed a registration statement with the SEC for a proposed IPO of its common stock.

In April 2008, Stemline raised \$12.5 million from a financing round.

Other Actions	Immunotoxin;Anticancer
Technologies	Biological therapeutic;Small molecule therapeutic;Systemic formulation unspecified
Last Change Date	09-Apr-2013

SL-401 DEVELOPMENT PROFILE

SUMMARY

Stemline Therapeutics, under license from Duke University, is developing SL-401, a biological conjugate consisting of IL-3 linked to diphtheria toxin that targets ILR-3-alpha on cancer stem cells, for the potential treatment of acute myeloid leukemia (AML), myelodysplastic syndrome (MDS)chronic myelogenous leukemia (CML) and blastic plasmacytoid dendritic cell neoplasm (BPDCN) ,. The company is also investigating SL-401 for the potential treatment of cancer including Hodgkin's lymphoma (HL) and multiple myeloma (MM),. By November 2009, Stemline was exploring the drug in phase I/II trials for AML and MDS. By February 2011, a phase I/II trial in advanced stage AML was completed and the company was 'poised' for phase III studies. In December 2011, clinical development for CML was ongoing and development was ongoing for MDL. In January 2013, positive outcome was achieved from a clinical trial in patients with BPDCN. At that time, the company was planning to initiate a pivotal phase IIb trial in BPDCN patients. In December 2012, a phase IIb trial in patients with third line AML, and also trials in earlier lines of AML and other interleukin-3 receptor-expressing malignancies were being planned ; in January 2013, the company was planning to initiate a clinical trial for advanced AML that would enable registration of the drug. In April 2013, preclinical data were presented in MM.

Stemline is investigating the IL-3 receptor modulators SL-501, SL-101 and SL-102 for hematological cancers.

SL-701 DEVELOPMENT PROFILE

SUMMARY

Stemline Therapeutics, under license from the University of Pittsburgh, is developing SL-701, as a peptide and dendritic cell vaccine directed to multiple defined epitopes on tumor bulk and cancer stem cells (CSCs), for the potential treatment of recurrent malignant glioma. By February 2011, the vaccine had completed a phase I/II trial in recurrent malignant glioma ; in September 2012, the vaccine was still listed as being in phase I/II trial. By February 2011, the drug was poised for phase II/III trials. In January 2013, a late stage trial in pediatric patients with advanced brain cancer was planned.

SL-201 DEVELOPMENT PROFILE

SUMMARY

Stemline Therapeutics is investigating a small molecule cell survival inhibitor SL-201, which targets T-201, for the potential treatment of hematological and solid tumors. In March 2007, IND-enabling studies were underway. In March 2011, in vitro efficacy studies were underway.

The company was investigating SL-202, a cell survival inhibitor, for the potential treatment of hematological and solid tumors. In March 2007, IND-enabling studies were underway ; however, by March 2011, the drug was no longer listed on the company's pipeline.

SL-101 DEVELOPMENT PROFILE

SUMMARY

Stemline Therapeutics is investigating SL-101, a monoclonal antibody conjugated to a truncated *Pseudomonas* endotoxin that targets the IL-3 receptor alpha chain (CD123) on cancer stem cells, for the potential treatment of hematological cancers. In March 2007, preclinical studies were underway; in March 2011, the drug was in in vitro efficacy studies ; in September 2012, this was still the case.

Stemline is also investigating the IL-3 receptor modulators SL-401, SL-501 and SL-102 for hematological cancers.

mAb based Smo modulators (cancer), Stemline Therapeutics

mAb based Smo modulators (cancer), Stemline Therapeutics SNAPSHOT

Drug Name	mAb based Smo modulators (cancer), Stemline Therapeutics
Key Synonyms	
Originator Company	Stemline Therapeutics Inc
Active Companies	Stemline Therapeutics Inc
Inactive Companies	
Highest Status	Discovery
Active Indications	Cancer
Target-based Actions	Smoothened receptor modulator
Other Actions	Anticancer monoclonal antibody
Technologies	Monoclonal antibody;Biological therapeutic;Parenteral formulation unspecified
Last Change Date	16-Mar-2011

mAb based Smo modulators (cancer), Stemline Therapeutics DEVELOPMENT PROFILE

SUMMARY

Stemline Therapeutics is investigating mAb-based compounds, which target Smo receptor, for the potential treatment of cancer. In March 2011, the program was listed as being in preclinical development.

mAb based Smo modulators (cancer), Stemline Therapeutics DEVELOPMENT STATUS

CURRENT DEVELOPMENT STATUS

Company	Indication	Country	Development Status	Date
Stemline Therapeutics Inc	Cancer	US	Discovery	10-Mar-2011

mAb based Smo modulators (cancer), Stemline Therapeutics DRUG NAMES

Names	Type
mAb based Smo modulators (cancer), Stemline Therapeutics	
monoclonal antibody based Smo modulators (cancer), Stemline Therapeutics

mAb based Ptc modulators (cancer), Stemline Therapeutics

mAb based Ptc modulators (cancer), Stemline Therapeutics SNAPSHOT

Drug Name	mAb based Ptc modulators (cancer), Stemline Therapeutics
Key Synonyms	
Originator Company	Stemline Therapeutics Inc
Active Companies	Stemline Therapeutics Inc
Inactive Companies	
Highest Status	Discovery
Active Indications	Cancer
Target-based Actions	
Other Actions	Unspecified drug target;Anticancer monoclonal antibody
Technologies	Monoclonal antibody;Biological therapeutic;Parenteral formulation unspecified
Last Change Date	16-Mar-2011

mAb based Ptc modulators (cancer), Stemline Therapeutics DEVELOPMENT PROFILE

SUMMARY

Stemline Therapeutics is investigating mAb-based compounds, which target Ptc, for the potential treatment of cancer. In March 2011, the program was listed as being in preclinical development.

mAb based Ptc modulators (cancer), Stemline Therapeutics DEVELOPMENT STATUS

CURRENT DEVELOPMENT STATUS

Company	Indication	Country	Development Status	Date
Stemline Therapeutics Inc	Cancer	US	Discovery	10-Mar-2011

mAb based Ptc modulators (cancer), Stemline Therapeutics DRUG NAMES

Names	Type
monoclonal antibody based Ptc modulators (cancer), Stemline Therapeutics	
mAb based Ptc modulators (cancer), Stemline Therapeutics
