Receptos (RCPT - OUTPERFORM): RPC1063 Advances Into Phase 3 Based on Positive Interim Analysis -- Reduces Clinical Risk, In Our View; Reiterate OUTPERFORM and \$44 FV

Price: \$28.47 Fair Value Estimate: \$44

- Receptos announced the initiation of the Phase 3 portion of the ongoing Phase 2/3 RADIANCE trial testing RPC1063 in relapsing multiple sclerosis (RMS). As planned, the Data Monitoring and Committee (DMC) reviewed data from the interim analysis of the Phase 2 portion and approved continuation of the Phase 2 portion as well as initiation of the Phase 3 portion of the study. We believe this reduces clinical risk for the program and anticipate that top-line Phase 2 results will be positive when they are released in mid-2014.
- Interim analysis of the Phase 2 portion continues to differentiate RPC1063 as a potential best-in-class S1P1R modulator, in our view. While detailed results were not made available, the company did note several key observations from the interim analysis. Importantly, the safety profile continues to look good and a key differentiator from other S1P receptor modulators on the market or in development, in our view. Based on the interim analysis, the overall adverse event profile appears relatively balanced between RPC1063 and placebo, with no serious adverse events to date. Only a modest impact on heart rate has been observed in RPC1063-treated patients compared to placebo patients, with no cardiac adverse events to date. This is consistent with results from the previously completed thorough QT study, and recall, Gilenya does have a significant effect on heart rate with the first dose. Thus far, there have been low rates of liver enzyme elevations that appear to support a favorable hepatotoxicity profile. In terms of efficacy, RPC1063 appears to be similar to other S1P receptor modulators based on preliminary clinical activity and reduction in lymphocyte count.
- Next: Top-line results from the Phase 2 portion of RADIANCE (RPC1063/RMS) as well as results from the Phase 2
 TOUCHSTONE (RPC1063/Ulcerative Colitis) trial in mid-2014. With cash runway into mid-2015, anticipated mid-2014
 releases of transforming top-line Phase 2 results testing RPC1063 treatment of RMS and IBD/UC are covered. Presuming a
 commercial partner is on board, we project full-year profitability in 2019 after launching RPC1063 in RMS/IBD in Q4:18/Q1:19.
- We reiterate our OUTPERFORM rating and \$44 fair value. We calculate RCPT's fair value based on the sum of a 30% annual discount and a 1x-10x premium range on our net peak annual sales estimate for each product and indication in the clinic to reflect risk.

Wedbush Securities does and seeks to do business with companies covered in its research reports. Thus, investors should be aware that the firm may have a conflict of interest that could affect the objectivity of this report. Investors should consider this report as only a single factor in making their investment decision. Please see page 4 of this report for analyst certification and important disclosure information.

Investment Thesis

Receptos, located in San Diego, CA, is an emerging biopharmaceutical company developing first-in-class and best-in-class drug candidates for large market opportunities and rare diseases. The company's lead product, RPC1063, is a sphingosine 1-phosphate (S1P1R) receptor modulator being developed as an orally-dosed treatment candidate being tested in a Phase 2/3 clinical trial for relapsing multiple sclerosis (RMS) and in a Phase 2 trial for inflammatory bowel disease (IBD). The second treatment candidate. RPC4046, is an anti-IL13 monoclonal antibody being developed as a potential treatment for an allergic/immune orphan disease called Eosinophilic Esophagitis (EoE). We believe clinical risk is lower than normal as RPC1063 has the same disease target as Novartis's approved RMS treatment Gilenya, but has a better safety profile and best-in-class potential. RPC4046 offers an orphan drug opportunity for Receptos to develop its own sales force. We believe execution risk is lower than normal as we consider management to have higher-than-normal knowledge and experience in the pharmaceutical industry—especially in multiple sclerosis. The CEO was successful at not only developing daclizumab, but also increasing value for FACET and making it an acquisition target for ABT. In addition, we view the rest of the management team as being top tier. Receptos ended Q3:13 with about \$81 million in cash and management projects runway into H2 2015, which includes top-line results from the ongoing Phase 2 trial testing RPC1063 treatment of RMS as well as IBD in mid-2014. We anticipate RPC1063 is likely to achieve clinical success and regulatory approval and could reach gross peak annual worldwide sales of over \$4 billion for RMS and over \$950 million for IBD. We also project RPC4046 treatment of EoE could reach over \$1 billion in gross peak annual worldwide sales with premium orphan drug pricing and the oral GLP-1 candidate could reach gross peak WW sales of over \$5 billion. If successful in Phase 2, we believe any of these candidates are likely to attract a partner and could trigger RCPT's acquisition.

Figure 1: ANTICIPATED MILESTONES (*OUR ESTIMATES)

Timing	Milestone	Estimated	Estimated
rilling	Milestone	Probability	Upside/Downside
H1:14	RPC 4046 EOE File IND for Ph2 initiation in 2014	-	-
Mid:14	RPC 1063 RMS Ph2 RADIANCE data release	80:20	+5-25%/-10-35%
Mid:14	RPC 1063 UC Ph2 TOUCHSTONE data release	75:20	+5-25%/-5-25%
H2:15	RPC 4046 EOE Topline Ph2 data release	50:50	+10-25%/-5-25%

Risks to Attainment of Our Fair Value

Clinical Risk: We believe clinical risk is low in 2013, but likely to increase in 2014 with release of Phase 2 clinical results. Receptos is a developmental stage emerging pharmaceutical company which has completed Phase 1 and is conducting a Phase 2 trial for their lead product candidate, RPC1063 for the treatment of relapsing multiple sclerosis (RMS) with top-line results expected in mid-2014. As will all clinical candidates, RPC1063 is susceptible to inherent risks of failure at any stage of drug development, which may include unexpected adverse events; however, the S1P1 target has been validated by Novartis' GILENYA™ and RPC1063 appears to have a better safety profile. The company is also developing RPC1063 as a treatment candidate for inflammatory bowel disease (IBD) which is currently in a Phase 2 clinical trial with initial results expected in mid-2014. A second clinical candidate, RPC4046 is being developed as a treatment candidate for Eosinophilic Esophagitis (EoE) and is expected to start Phase 2 in 2014. Because the company is not expected to release initial top line results from mid-to-late stage clinical candidates, we do not believe clinical risk to our fair value is high in 2013.

Regulatory Risk: We consider regulatory risk to be low in 2013; however; in general, we believe if RPC1063 successfully completes clinical development, we believe regulatory risk is likely to be lower than average. That the FDA approved Novartis' GILENYA™ in 2011 despite safety issues including potential mortality upon initial dosing due to cardiovascular adverse events, suggests to us that a safer drug candidate with a similar efficacy profile is also likely to obtain approval. Receptos has never obtained marketing approval for a drug candidate and we do not anticipate NDA filing for the lead drug candidate (RPC1063) until 2017. Upon completion of regulatory review, if the FDA requires additional studies or data, the resulting increased costs and delays in the marketing approval would likely increase financing risk. Even after conducting such trials and submitting new data, the FDA may find these to be insufficient or may not agree with the analysis and still may not approve the NDA. Any delay in obtaining, or an inability to obtain, marketing approvals would increase financing risk by delaying commercialization as well as potential profitability. Regulatory risk can involve turnover in regulatory decision-makers, which can change policy and approval criteria after the trial is conducted. Agency statisticians may choose a different analytical process than was conducted in the NDA and conclude that the trials failed to achieve statistical efficacy. Changes in standard-of-care occurring while the trial is ongoing may also result in the design being found to be obsolete during regulatory review. Even if a product is approved, the designated patient population may be much smaller than expected, which could limit sales potential.

Receptos | 2

Post-approval clinical studies may be required as well as limits on sales and marketing practices and materials. If unexpected adverse effects emerge the drug can be withdrawn from the market. Regulatory requirements also vary among different countries and may result in requirements for additional clinical trials.

Manufacturing Risk: We consider manufacturing risk to be low in 2013, but higher than normal for the future as Receptos lacks manufacturing capability and plans to continue relying on third parties to supply its product candidates. In addition, the company does not have any executed agreements for long-term commercial supply for any of its drug candidates, but plan to do so for RPC1063 prior to commercial launch. For RPC4046, AbbVie has agreed to manufacture enough for preclinical and clinical trials and may continue to or may choose to engage a third party following the planned Phase 2 results in EoE, after which, AbbVie may choose to execute an option to collaborate with Receptos for RPC4046 development and commercialization. Multiple improvements to the manufacturing process for RPC4046 have been made and a comparability assessment of the material used in the completed Phase 1 study versus the new process must be filed prior to the initiation of the Phase 2 in EoE.

Commercialization Risk: We consider commercialization risk to be low in 2013, but higher than average in general due to Receptos' small size and development stage. Receptos' business model is to develop and commercialize clinical candidates; however, for small development-stage companies, we view commercialization risk in general as higher than normal until/unless the company partners commercialization with an appropriate larger pharmaceutical company—especially for large indications such as multiple sclerosis. We anticipate Receptos is likely to partner commercial activities for large markets globally. For rare diseases such as EoE, the company may hire a small specialty sales force for the US, but we anticipate the company will partner commercialization for primary care globally as well as for all physicians outside the US. We consider this commercial plan to be optimal for leveraging potential profits from sales for a small company.

Competition Risk: We view competition risk as low in 2013 but, in general, higher than average unless Receptos partners with an appropriate global pharmaceutical company for commercialization. In general, we believe a small development-stage emerging pharmaceutical company with limited resources has higher-than-average competition risk. In the situation with RPC1063, while we believe large pharmaceutical companies with large marketing budgets, such as Novartis and Biogen-Idec may counter-detail RPC1063 after potential launch in late 2018, if its emerging profile of equal efficacy to GILENYA™, but improved safety while maintaining oncedaily oral dosing is maintained through clinical development, we believe physicians treating MS patients are likely to prefer it over the currently approved oral therapies. In addition, physicians treating MS have commented that twice-daily dosing such as for Biogen-Idec's Tecfidera™ may have reduced real-world efficacy as their patients may forget to take the evening dose.

Intellectual Property Risk: We consider intellectual property risk to be low in 2013 and, in general, as the company has an exclusive license for the RPC1063 composition of matter patent which expires in May 2029 and could be extended into 2032. In addition, intellectual property protection for RPC4046 also has a long runway with expiration in 2028 and may be extended up to 5 years.

Financing Risk: Receptos ended Q3:13 with about \$80.8 million in cash and investments and reiterated their runway guidance into Q2 2015 by including the \$25MM remainder in MidCap Financial venture debt. We consider financing risk to be low in 2013, but likely to increase in H2 2014.

Investment Rating System:

Outperform: Expect the total return of the stock to outperform relative to the median total return of the analyst's (or the analyst's team) coverage universe over the next 6-12 months.

Neutral: Expect the total return of the stock to perform in-line with the median total return of the analyst's (or the analyst's team) coverage universe over the next 6-12 months.

Underperform: Expect the total return of the stock to underperform relative to the median total return of the analyst's (or the analyst's team) coverage universe over the next 6-12 months.

The Investment Ratings are based on the expected performance of a stock (based on anticipated total return to price target) relative to the other stocks in the analyst's coverage universe (or the analyst's team coverage).*

Rating Distribution (as of September 30, 2013)	Investment Banking Relationships (as of September 30, 2013)
Outperform:55%	Outperform:14%
Neutral: 41%	Neutral: 2%
Underperform: 4%	Underperform: 0%

The Distribution of Ratings is required by FINRA rules; however, WS' stock ratings of Outperform, Neutral, and Underperform most closely conform to Buy, Hold, and Sell, respectively. Please note, however, the definitions are not the same as WS' stock ratings are on a relative basis.

The analysts responsible for preparing research reports do not receive compensation based on specific investment banking activity. The analysts receive compensation that is based upon various factors including WS' total revenues, a portion of which are generated by WS' investment banking activities.
